TECHNICAL REPORT

SUBMISSION INFORMATION

ALC. E : 133257 : 0211

DATE JOB BOOKED IN: 18/02/2011

DATE REPORT ISSUED: 22/03/2011

Sample Description: AA batteries, 7 types, high drain tests

Applicant: Supreme Imports Limited
4 Beacon Road
Ashburton Park
Asburton Road West, Trafford Park
Manchester
M17 1AF

Applicant Ref. / Order:

TEST INFORMATION

Evaluation To: High drain discharge tests.

Standards Employed: BS EN 60086-1:2001
BS EN 60086-2:2001

CONCLUSIONS:

All of the batteries exceeded the Minimum Average Duration (MAD) that was anticipated for the discharge tests. The JCB OXI and ASDA Longlife gave the best results at 210% of MAD and the Pairdeer the poorest at 181% of MAD.

The Supreme Lithium exceeded the results of all of the alkaline batteries however these have a different chemical composition and are included for comparison purposes only.

No leakage was recorded from any cell during testing.

SUMMARY OF EXAMINATION

Introduction:

An examination was requested to ascertain compliance with the requirements as detailed on page one of this report. The following clauses were considered applicable and our findings were as follows:

BS EN 60086-1:2001

CLAUSE	DESCRIPTION	RESULT	*COMMENTS
4.2	PERFORMANCE		
4.2.1	DISCHARGE PERFORMANCE		See note 1

**See Annex II : Comments*

ANNEX I: SUBMISSION DESCRIPTION

Sample Description: AA batteries, 7 types, high drain tests

JCB Super Alkaline

JCB Digital OXI

Duracell Plus

Battery types Energizer Ultra

ASDA Longlife Alkaline

Pairdeer Ultra Digital

Supreme LiFeS2 Lithium

Figure 1

ANNEX II : ADDITIONAL COMMENTS

- The 7 types of AA batteries were subjected to a high drain discharge test using a resistive load of 3.9 Ohms applied to each battery for 1 hour in 24 until the on load battery voltage dropped below the End Voltage of 0.8V. This is intended to simulate use in a high drain appliance such as motor driven toy.

The Minimum Average Duration expected under these test conditions is 4h

The samples tested achieved the following results:

JCB Super Alkaline	8.2 hours	205% of MAD
JCB Digital OXI	8.4 hours	210% of MAD
Duracell Plus	7.8 hours	195% of MAD
Energizer Ultra +	7.75 hours	194% of MAD
ASDA Longlife Alkaline	8.4hours	210% of MAD
Pairdeer Ultra Digital	7.25 hours	181% of MAD
Supreme LiFeS2 Lithium	9.5 hours	238% of MAD.

The lithium batteries would not normally be subjected to the same test regime but were included in this test for comparison purposes at the client's request.

- The load tests on batteries are not based on the current but on the value of resistance used as a load.

For AA batteries a load of 10 Ohms would be used to simulate a personal music player or radio whereas a load of 3.9 Ohms would be used to simulate a motor driven toy which has approximately 2.5 times higher current drain and consequently would drain the batteries a lot quicker.

The expected Minimum Average Duration or AA Alkaline batteries with a 10 Ohm resistor is 11.5hours, with a 3.9 Ohm resistor the expected MAD is 4 Hours.
